RPA Specialization

Course 6: UiPath Orchestrator and Capstone Projects

Choosing between ‘On-Premise’ and ‘Cloud’ Orchestrator

Choosing between ‘On-Premise’ and ‘Cloud’ Version of Orchestrator

There are two versions of Orchestrator:

- On-Premise
- Cloud

The course covers both versions, and the student may choose between the two or both.

'On-Premise' Orchestrator: The 'On-Premise' Orchestrator is installed within an Organization's infrastructure. If you work in an organization where an 'On-Premise' Orchestrator is available and want to be trained on it, you may choose this version.

'Cloud' Orchestrator: The 'Cloud' Orchestrator is a web application that can be easily accessed by creating a free account on 'cloud.uipath.com'. If you work in an organization where 'Cloud' Orchestrator is used, or you are a student, you may choose this version. There are multiple sign-in options available. You can sign in with your Google, Microsoft, or LinkedIn account. Alternatively, you can create an account using your email address. A free account gives you access to various Orchestrator features that you can use to practice the concepts explained in the course.

Note: After connecting UiPath Assistant with Cloud Orchestrator, you may receive a notification to update Studio to the latest version available.

If you update your Studio 2021.10 to the latest version, you need to uninstall it and re-install Studio 2021.10 as this course is aligned to Studio 2021.10 version. Therefore, it is recommended to have the same version throughout this course.

To revert to Studio 2021.10 version, please follow the installation process from section 2 of ‘Practice Exercise-Download, Install, and Manage UiPath Studio Academic Alliance Edition 2021.10’ in Course 1 – RPA Basics and Introduction to UiPath.
